Telstar's Interprint Die Station with Hot Stamp Unit Stationed on a Mark Andy 2200 Rail Kit

Our Servo-Driven Interprint Die Station with Auto Register and Integrated Unwind/Rewind can be bridge or rail mounted on nearly any press.

The unit matches the parent machine's die station dimensions for exchanging tooling.

Rotary Die Cutting, Hot Stamping and Heat Laminating can be performed within the printing process.

In most cases the web travels between flexo stations so no press capabilities are sacrificed.
