

Equipment Application Report

COMPLETE PORTABLE COLD FOIL MODULE

This module is designed to be a portable self contained unit. Complete with:

- Servo Drive
- Impression Roller
- Unwind/Rewind
- Flexo Station
- Nip Roller Assembly
- UV Station

If you do not want to sacrifice a print station for the adhesive, Telstar's complete CF module will attach quickly to just about any in-line narrow to mid web press. In most cases, the module attaches with four bolts to the upper frame supports. The web then follows a standard turnbar web path into and back out of the CF module. Registration is guaranteed to equal your existing press registration. This complete system is truly the right equipment for the job. Consistent, high quality, in register results are ensured with this dedicated system. The ability to sequence the unit in-line with printing at any location on just about any press further highlights the advantages of the Cold Foil application.
