

Equipment Application Report

Digital Finishing Press

The frame-up construction of this multi-unit converting press for Label Power in Australia began with very particular spec demands. The press produces wine labels decorated on a second pass with first-pass registration. The décor required applications offered only by Telstar. The printed stock undergoes decorating details from four different units built on a custom chassis. Telstar's customer is running cold foil, a flexo unit, an embossing station plus die cutting and finishing all from the wide collection of Telstar retrofit possibilities.

Look to Telstar for UV Rotary Screen, UV and Conventional Flexo, and UV Letterpress Expertise
