

Equipment Application Report

**Telstar Hot Stamp
Bridge Mount on a Mark Andy 2200
Upgrade with No Sacrifice of a Print Station**

Telstar's servo driven interprint die station easily attaches to the top edges of a print station on Mark Andy 2200 presses. The web travels to and from the unit without skipping or sacrificing a station. The interprint die station can be used as a die station, laminator, scoring unit, or hot stamp system anywhere within the printing sequence.
