## **Telstar Hot Stamp on a Comco Commander**

Telstar's interprint die station with Telstar's hot stamp system is mounted between two print stations on the Commander press. Integrated unwind and rewind airshafts with pneumatic tension controls supply and take-up the foil. This sequence allows overprint varnishing the foiled image in one pass through the press. The die station is engineered to accept the parent machine's tooling for multiple use as a die station, laminator, scoring unit, and hot stamp system. Auto register is available as an option.
